

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

OR Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use a technical context · Console Status Check

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;

class Program
{
    static void Main()
    {
        Console.WriteLine("What is your name?");
        string userName = Console.ReadLine();
        Console.WriteLine("Hello, " + userName);
    }
}
```

Library	Class	Main method	Prompt	Input + variable	Output
---------	-------	-------------	--------	------------------	--------

03 Explain each label in your own words.

Class

A container that groups related code.

The class is at the top and the name is Program

Main method

The method where the console program begins.

The program begins after class Program

Method / function

A named action. In C#, a function inside a class is called a method.

Console.WriteLine("What is your name?"); is a method that writes a line

Variable

A named place that remembers a value.

userName remembers the string that's inputted.

Console.WriteLine

Displays a line of text in the console.

WriteLine displays "Hello, " and the username userName

Console.ReadLine

Waits for typed input and returns that text.

ReadLine receives the input from the user which is a username

04 Trace the data.

INPUT

The learner will type a username

VARIABLE

userName will store the input

OUTPUT

The app will display the username that was inputted

05 Plan your pathway version.

What will you replace or add after the tutorial app works?

I plan on adding a prompt like this one that asks the user to enter something and the program will return in. I also wonder if it can return just words or images too. I will test different things.

Optional ways to go beyond the tutorial

- ☒ Another prompt ☐ A decision or conditional ☐ ASCII art in the console
☐ An image in README.md ☐ Another tested feature

06 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
